

Clinic Manager On-Site Research Summary

Lisa Sysun

Mary Vasseur Finn

March 2023

WE ALL OWN COMPLIANCE

We will conduct business with integrity and honesty in compliance with all laws, company policy, and our values.

We are committed to produce products and deliver services that are safe and of the highest quality for our customers.

Project Timeline (To Date)

VIDEO INTERVIEWS

Begin Video Interviews (7 CMs, 2 Float CMs, 3 ATs)

NOV

14

ON-SITE INTERVIEWS

Begin Clinic Shadowing and Interviews (15 CMs, 2 FAs)

JAN

09

ANALYZE FINDINGS

Create Miro board of high-level observations bucketed into categories. Begin Summative Report and CM Persona revisions.

FEB

20

DEBRIEF AND PLANNING

Debrief on the CM Research, Waltham, MA. Discuss next steps on complementary deliverables to Summative Report and Personas. Plan for Interactive Workshop.

MAR

06

INTERACTIVE WORKSHOP

Interactive Workshop, Waltham, MA. Clinic Managers, Facility Administrators, Area Team Leads, Directors of Operations and Charge Nurses; Corporate, Product Management and UX Design representatives.

- Review findings together
- Identify opportunities
- Co-design improved experiences
- Prioritize next steps
- Imagine future roadmaps

MAR

16

MAR

17

WORKSHOP DEBRIEF

Debrief on the Workshop, Waltham, MA.

SUMMATIVE REPORT

Presentation of Summative Report Waltham, MA

Overview

- 
- I. Research Objectives and Participants**
 - 1. Recap of research goals
 - 2. Research timeline and scope
 - 3. Background of Clinic Managers interviewed (years in role and prior experience)
 - 4. Data collation process for on-site interviews

 - II. Breakdown of Findings (In-Person Interviews Only)**
 - 1. Positives and Delights
 - 2. Pain Points – High Level Summary
 - a. Categories (by Rating)
 - b. Applications and Services (by Frequency of Mention)
 - 3. Technology-Related Issues
 - a. Admissions
 - b. Documentation
 - c. Training and Education
 - 4. Operational Issues
 - a. Staff Turnover
 - b. External Services or Vendors

 - III. Recommendations from Clinic Managers**

Recap: Research Goals and Background *

- **Gain insight** and knowledge into the “day in the life” of a Clinic Manager
- **Experience** the job’s environmental context
- **Observe and identify** variations in workflows
- **Continue exploration of pain points** expanding on discovery from telephone interviews
 - Insufficient staff and high turnover
 - Scheduling (both staff and patient)
 - Inadequate training for the role and lack of ongoing support
 - Collecting and compiling data for reporting
 - Systems and applications
- **Capture** insights that can be utilized for persona development, journey mapping and/or storyboarding

* Adapted from L Charette’s JAN 2023 “CM Field Research Kickoff” presentation and L Sysun’s “CM Research Presentation”

Timeline – 2022 Video Interviews

4 Weeks
12 Interviews

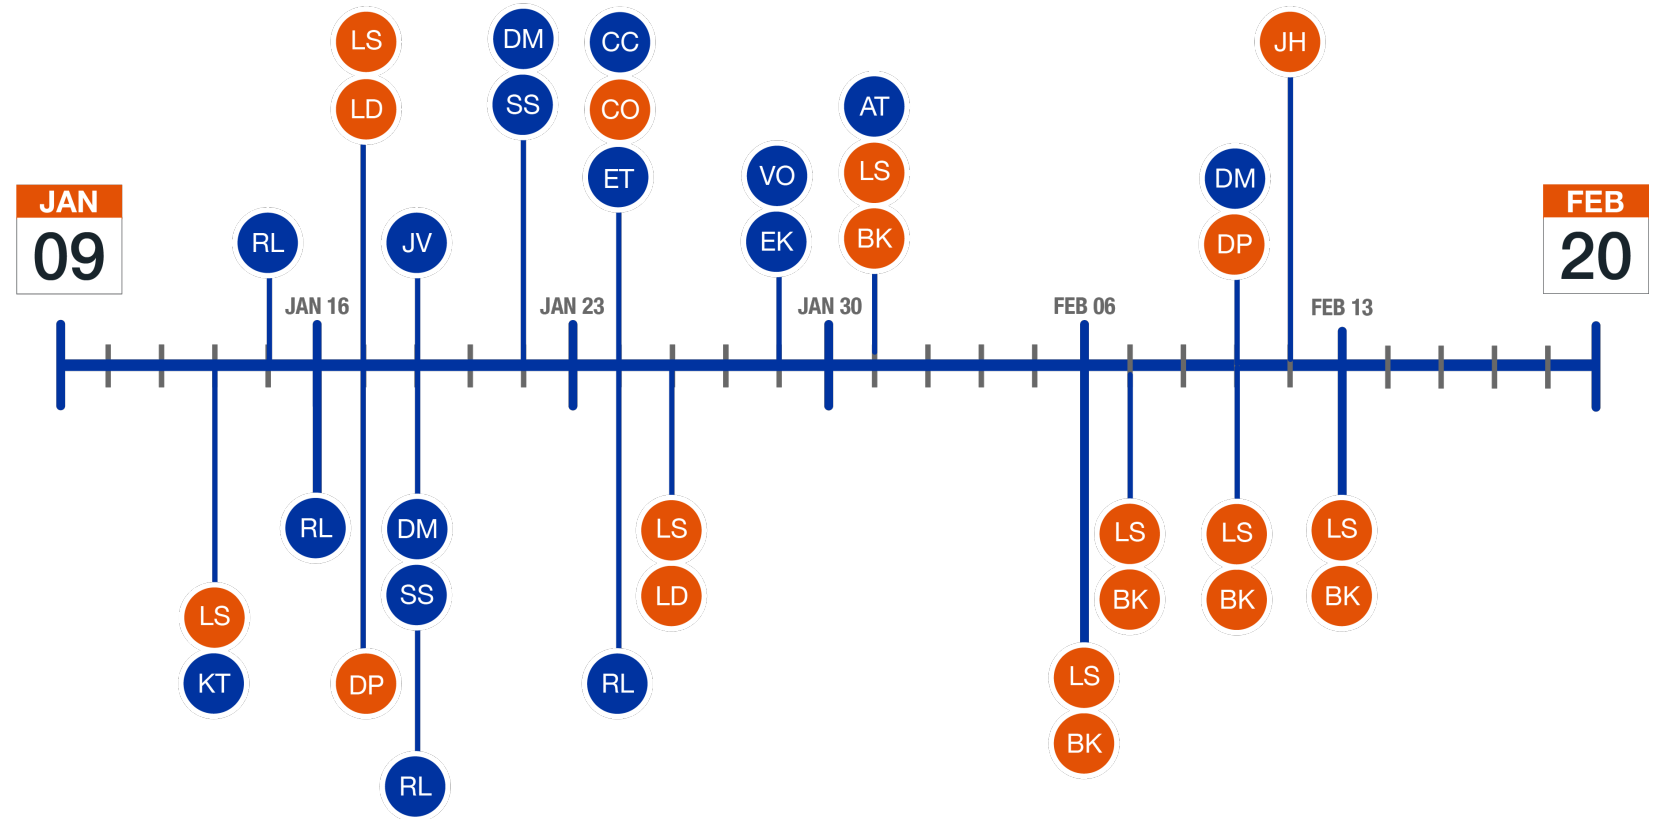

● User Experience Researchers:
LS, DP, GB, JH

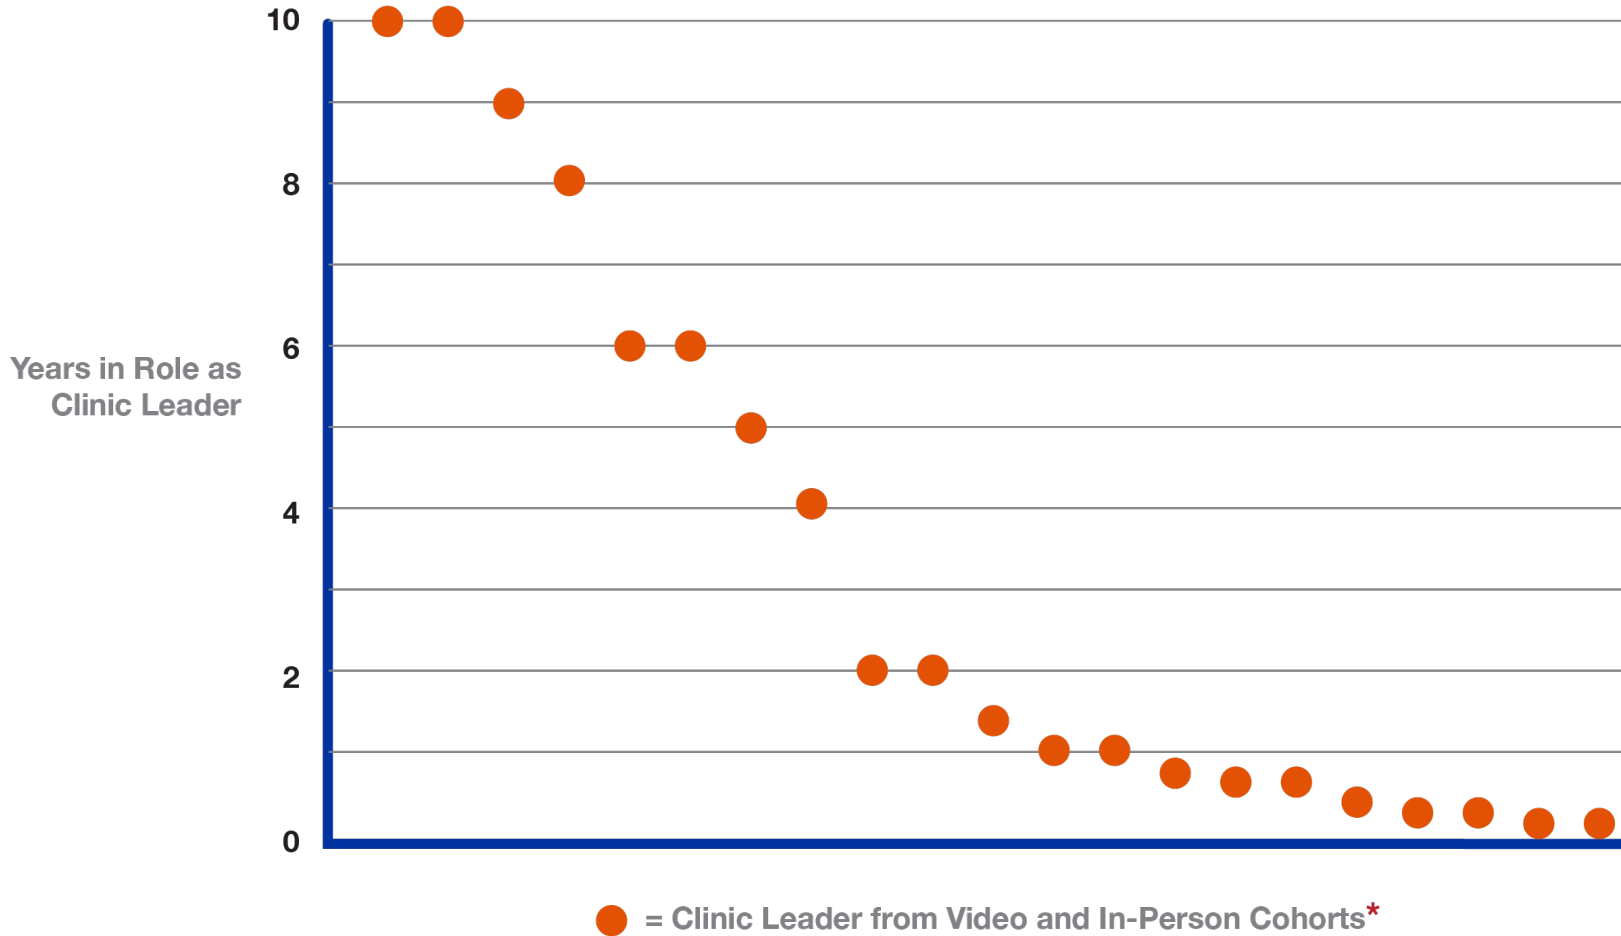

Timeline – 2023 In-Person Interviews

- 5** Weeks
- 6** Interviewers from UX
- 11** Interviewers from PM
- 17** Clinics
- 20** Interviews

- User Experience
- Product Management

Cohort Background: Time in Current Role

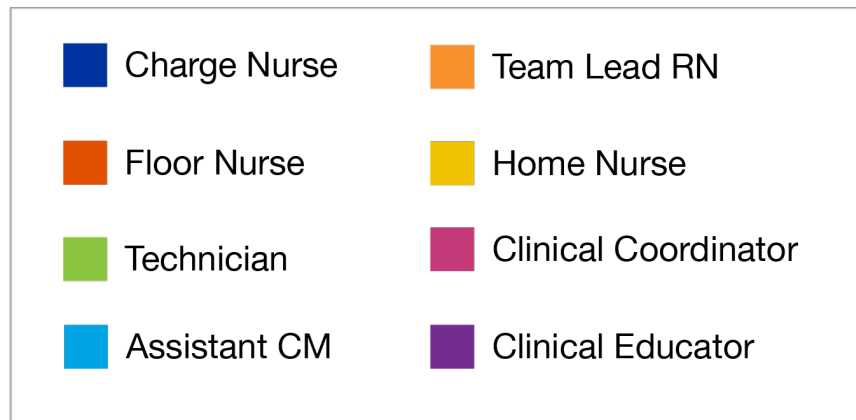

4.4 Average number of years in the Role of Clinic Leader among the interviewees

2.0 Median number of years in the Role of Clinic Leader among the interviewees

46% Clinic leaders interviewed were in their role for one year or less

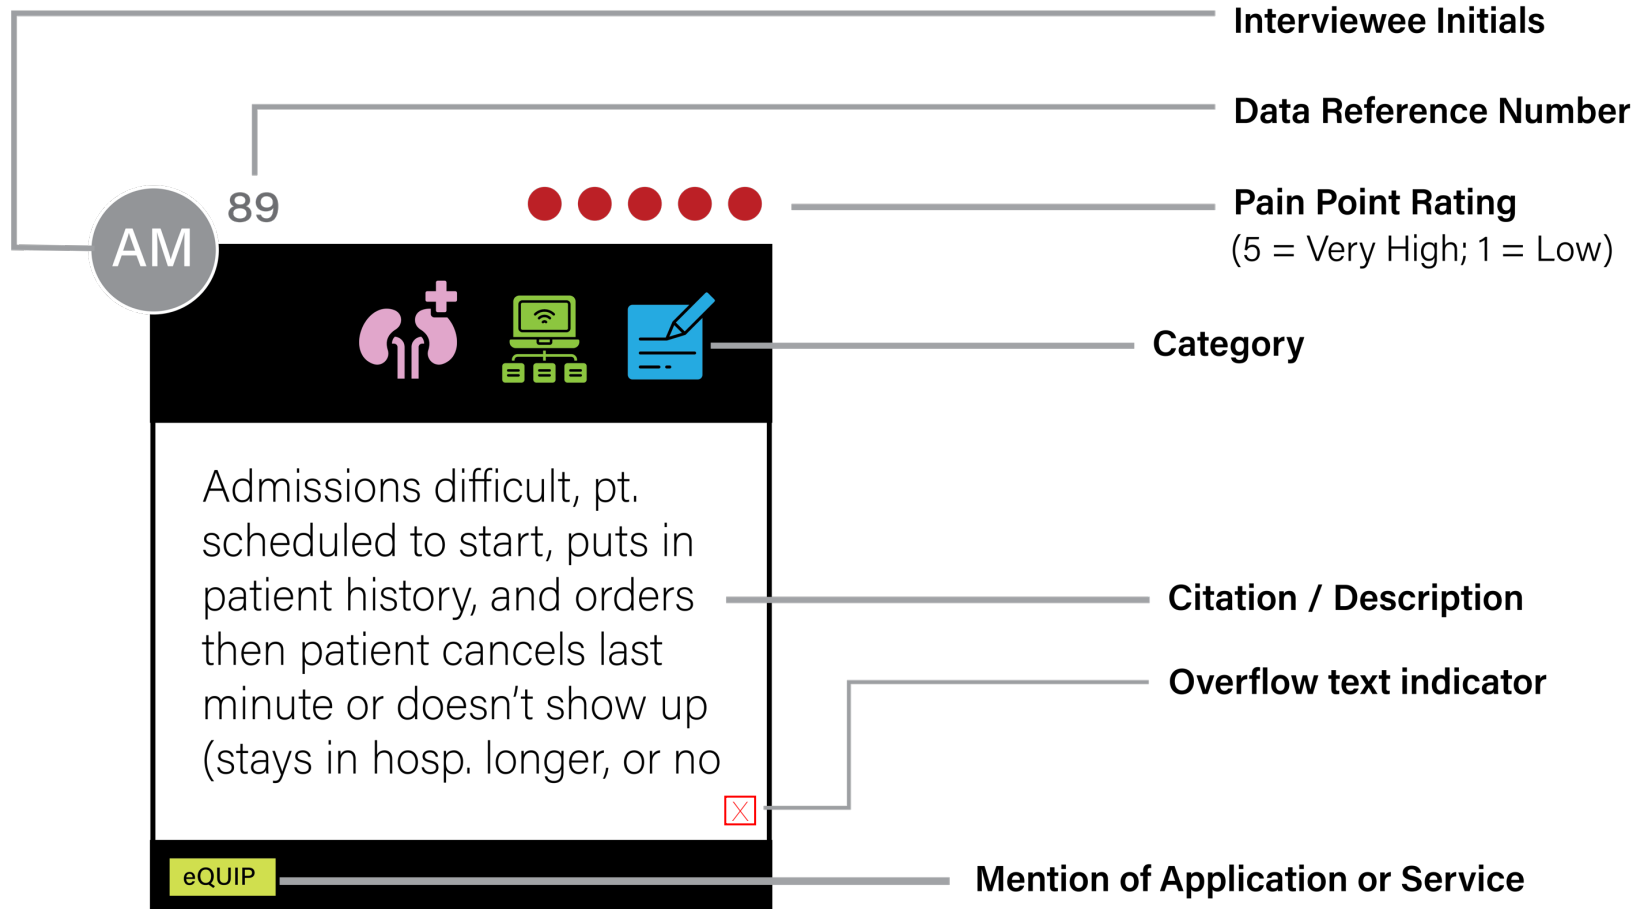

* Four Clinic Leaders from the video interviews are missing from this data. One outlier is not included in the graph; this CL was in the role of CM for 30 years.

Cohort Background: Prior Roles*

* Includes data from both cohorts. Data on this measure was not available for seven of the interviewees.

Breakdown and Collation of Data (On-site Interviews)

Breakdown and Collation of Data (Cont'd)

Over 200 pieces of data were isolated and captured from 32 interviews

Clinic Manager (CM) Research Project
On-Site Clinic Interviews
JAN - FEB 2023

I. IDENTIFICATION AND RATING OF PAIN POINTS
*** = Pain Point Rating

IIa. COPING STRATEGIES FOR PAIN POINTS

IIb. MAGIC WAND SOLUTIONS

TIME AT DESK (Percentage values shown on cards: 40%, 50%, 12%, 50%)

Breakdown and Collation of Data (On-site Interviews)

Themes Identified

Administrative – May include tasks outside of the CMs role, or those which could be automated

Tool

Mentions – Specific application or service named

Documentation – Duplicate documentation or manual documentation

Training/Education – Learning new skills or credentialing requirements

Reporting – Collecting or generating information for monthly reports

Staff – Includes inadequate staff, turnover, or people management

Scheduling – Staff scheduling and/or patient chair assignments

Tech/Apps/Data – Includes usability issues, fragmented information, timeliness of data availability

Admissions – The process of onboarding new patients to a clinic

Transportation – Patient transportation to the clinic

Labs – May include physical pickup of specimens as well as data reports

Overview

I. Research Objectives and Participants

1. Recap of research goals
2. Research timeline and scope
3. Background of Clinic Managers interviewed (years in role and prior experience)
4. Data collation process for on-site interviews

II. Breakdown of Findings (In-Person Interviews Only)

1. Positives and Delights
2. Pain Points – High Level Summary
 - a. Categories (by Rating)
 - b. Applications and Services (by Frequency of Mention)
3. Technology-Related Issues
 - a. Admissions
 - b. Documentation
 - c. Training and Education
4. Operational Issues
 - a. Staff Turnover
 - b. External Services or Vendors

III. Recommendations from Clinic Managers

Positives and Delights

Interestingly, the vast majority of positives heard were related to people and relationships in the clinic community. These included:

Staff

- Having great relationships with staff, perhaps because the CM spends time out on the floor with them, and is very available to staff when in her office
- Having an effective CN with whom to share responsibilities is a huge asset
- One CM stated that their clinic was well-staffed

Training

- Training was cited as “very effective,” and said to have improved over the years
- Being trained by peers (other CMs) was considered “vital”
- Having an ATL for a mentor enabled gaining proficiency in the requirements of the role
- Being given a zip file of “things you will need” was immensely helpful

Once you train wrong, it feeds the cycle of people training other people wrong. Then you have to change a culture, which takes a long time.

The most important thing right now is to keep your team happy and empowered

I would be lost without our biomed.

Positives and Delights (Cont'd)

Supportive DOs:

- Meetings at ATL level with DOs provide vital reinforcement
- Supportive DOs are indispensable

Connecting with other CMs:

- Networking with other CMs create essential support systems and emotional comradery

Other mentions:

- It is a source of gratitude that Clinical Services always picks up the phone when called and is helpful
- The team **loves** the new wrist bands (Yubi Key) to work with Chairside
- A “Community Logbook” kept at the nurses’ station that functions as a quick reference of what the upcoming day looks like helps with communications and planning
- Training days are beneficial

It's huge. I probably wouldn't be here if it wasn't for Amy [her DO]. I think I'm pretty lucky

Tutorial/
Mentoring
and the
Quick Start
Kit were
phenomenal

(Re: Daily communication and mutual support from other CMs:)
Everyone should foster that —
because doing this job is pretty lonely.

Paint Points: High-Level Summary

Ratings

Pain Point Assigned Ratings

Very High

High

Moderately High

Interviewees were asked to rank their point points on the following scale: 1. Biggest paint point, 2. Second biggest, 3. Third biggest, and 4. Others in priority. Many provided only three levels of ranking; some provided as many as seven. For those who provided none, ranking could usually be inferred with confidence from the order in which PPs were shared and/or the language used to describe them.

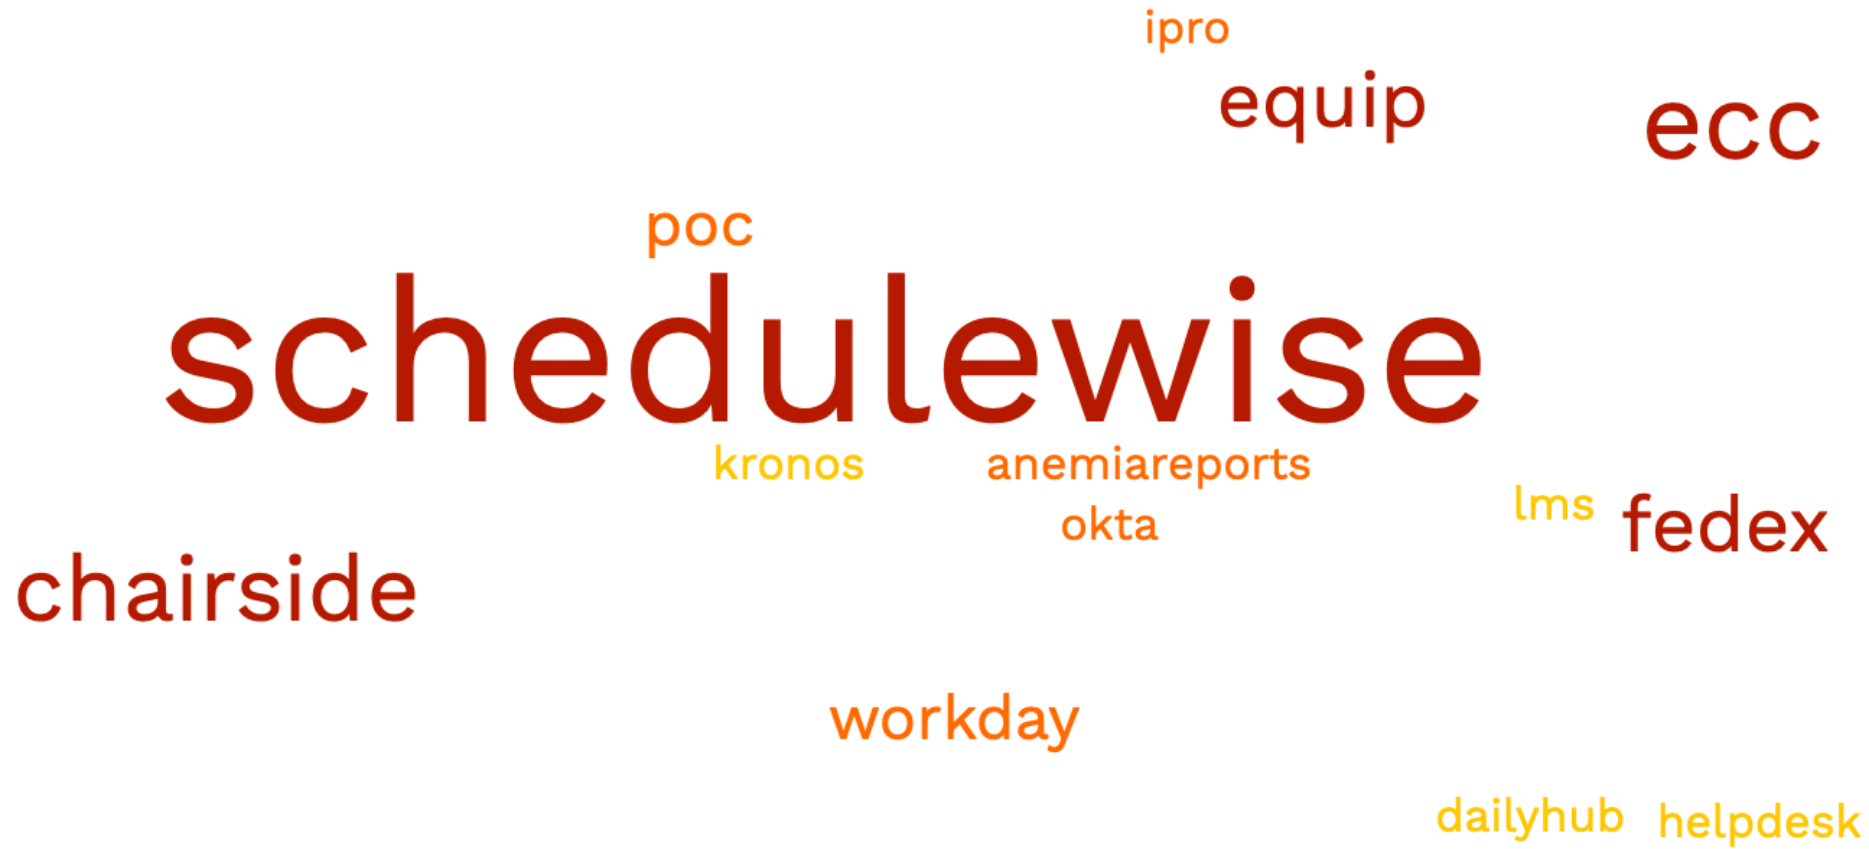

Paint Points: High-Level Summary

Frequency of Mention — Applications and Services

Paint Points: High-Level Summary

Frequency of Mention — Applications and Services (Cont'd)

Paint Points: High-Level Summary

ScheduleWise

Schedule Wise is not flexible and this causes a major ripple effect when patients arrive early or late for treatment.

Every single day I'm in here changing somebody's schedule.

Not enough time afforded between patients

it adds burden

There's no human element in ScheduleWise.

Inability to get approval to hire sufficient staff because Schedule Wise calculates that we already have enough staff capacity when we actually don't.

Optimizing of patient schedules, and changing their chairs and times, causes patient anxiety, because they prefer to stay in a familiar chair.

it's too rigid.

It takes up hours of my time to manually fix problems in the patient schedule that the Wizard creates.

It is too inflexible

We have had to close to new admissions due to insufficient staff, even though there are spare chairs / - shifts that could be utilized.

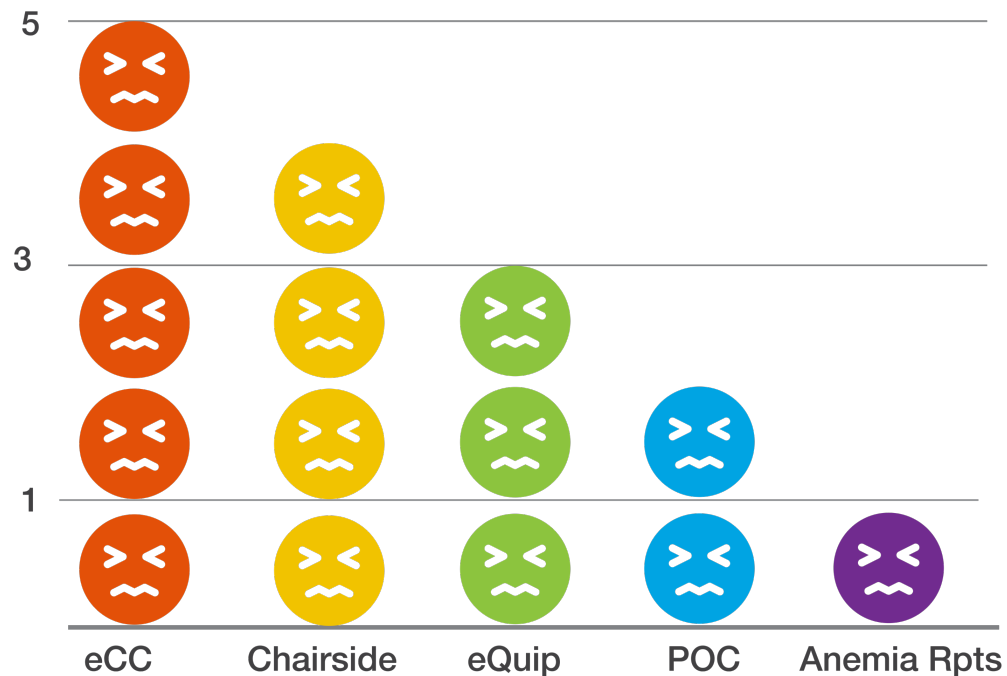

Staff will quit if you can't work with their schedules. We get a "hit" each time

Doesn't reflect our real operational situations

our actuals don't match the plan.

Technology-Related Issues

Applications — Frequency of Mention

“The Big Five” Clinical Applications Mentioned in Pain Points

- 
 - Orders Approaching Expiration — biggest pain point. Need ability to multi-select orders and renew all simultaneously.
 - Alerts aren’t prioritized from critical to not urgent
 - RD/SW notes are hard to find
 - Tagging several co-morbid as “secondary” is repetitive
- 
 - Lack of integration between Chairside and eCC — requires frequent redundant documentation
 - Medications screen is tiny and hard to negotiate
- 
 - Patient lists in eEquip are often outdated: Patients who have transferred to another clinic or died are still on the list, which impacts the clinic’s scores
- 
 - “Biggest time waster”
 - Hard for patients to understand. Needs to display patient progress and updated interventions.
- 
 - Anemia reports are sent by email. They must be printed out and manually re-entered into another application.

Technology-Related Issues

Documentation

Associated Application or Process	Description of Complaint
Administrative	Manual process: Updating policies; staff contacts in paper binder, staff phone tree
Admissions	Data loss: Clinic puts orders in 3-7 days in advance of the patient's start date; if the date changes or the patient decides to not be admitted, then all the orders must be cancelled then re-entered if patient is then admitted at a later date
Anemia Tracking / Reporting	Data recording and transmission: CM receives Anemia Reports by email, prints them out, then re-enters them on her computer. Anemia tracking is done on an Excel spreadsheet on a laptop at a nurses' station.
Chairside / eCC	Lack of integration: Between Chairside and eCube Clinicals, lots of redundancy exists, and repeated and reverse documentation is required
Charting	Duplicate medications charting: On paper and in Chairside
Training and Licensure	Manual process: Tracking staff training and licensure is done independent of LMS. Some CMs use Excel spreadsheets in place of LMS.

Technology-Related Issues

Admissions: A Broken System

- There is a disconnect between Admissions, the **ScheduleWise Lobby**, and actual chair availability
- Sometimes CMs don't have information about new patient **start dates**
- If a new patient doesn't show or is rescheduled for a later date, all their **order information entered into the system is lost** and has to be re-entered
- Often **patients not suitable for dialysis** in a clinic are admitted and have to be immediately discharged
- There is **no checklist** to insure everything is properly in place when starting a new patient — leaves staff scrambling at the last minute for things like HepB status, financial clearance and CVC placement

“ a
constant
source of
confusion ”

“ the fallout is
very angry doctors
 and **train wrecks** ”

Technology-Related Issues

Training and Education

Certifications and licensure:

Accessing and organizing data from LMS to manage and track staff training compliance is described as “very time-consuming and painful.” CMs work around LMS by manually tracking certifications and licensures using Excel spreadsheets.

“ **very**
time-consuming
and painful ”

Operational Issues

Clinical Manager Training

Clinic Managers cited the following with respect to the training they received after becoming CMs:

- For many, their clinical backgrounds meant they had little to no experience to help them manage the **business aspect of the role**
- **Hands-on learning and shadowing** were seen as far superior to learning via online
- **Insufficient staff** meant they were constantly having to sacrifice their managerial responsibilities for the priority of patient care
- Some felt ill-equipped to deal with the challenges of conflicts between staff and wished they'd received training in **people management**
- Many wanted more formal training in the use of **new applications**

“Applications shouldn’t be rolled out until everyone is trained to use them.”

Operational Issues

Clinical Manager Training (Cont'd)

One suggestion:

“ There should be a **full CM training program** before starting the job – maybe **3 weeks** long. Include **budget, financing, applications**. Then a mentorship lasting **3-4 wks**. (ATLs could be mentors). They need guidance re: **processes** [checklists], flowcharts, **SOPs** [opening/closing/aquaB system], list of regulatory people in their area, etc. ”

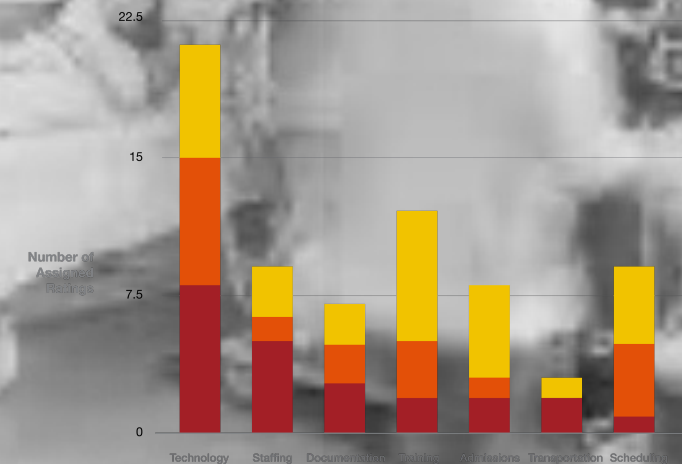

Operational Issues

Staffing Crisis

Being short-staffed ranked second highest in “Pain Points” after Technology. The causes cited include:

- **Our competitors pay higher** hourly rates — we train them, then they leave for better wages
- **ScheduleWise** calculates that clinics have enough staff when they actually don't, so CMs are unable to get approval to hire additional staff

Operational Issues

Staffing Crisis (Cont'd)

The “fallout” created includes:

- **New CMs don't have time to dedicate to learning** their new jobs because are pulled away from their desks
- CMs must fill in the gap for lack of staff on the floor and don't have **sufficient time to attend to their** primary responsibilities
- Available chairs remain empty — **clinics are closed to new admissions** — because CMs can't ask already overloaded staff to take on more work
- The clinic cannot accommodate transients, nursing home patients or hospital patients
- Some shifts must be [temporarily] eliminated
- **Staff are “maxed out” on PTO**, but they can't take time off because there isn't enough staff to cover for them

Operational Issues

The  Effect of External Service or Vendor Failures: FedEx

FedEx' failure to reliably and consistently pick up labs creates a cascade of problems for the CMs and their staff

Specimens aren't picked up

Algorithms and dosing affected

Lab reports are missed

CQS score is affected

Staff sense of agency is diminished

Overview

I. Research Objectives and Participants

1. Recap of research goals
2. Research timeline and scope
3. Background of Clinic Managers interviewed (years in role and prior experience)
4. Data collation process for on-site interviews

II. Breakdown of Findings (In-Person Interviews Only)

1. Positives and Delights
2. Pain Points – High Level Summary
 - a. Categories (by Rating)
 - b. Applications and Services (by Frequency of Mention)
3. Technology-Related Issues
 - a. Admissions
 - b. Documentation
 - c. Training and Education
4. Operational Issues (Services, Systems, Processes)
 - a. Staff Turnover
 - b. External Services or Vendors

III. Recommendations from Clinic Managers

Clinic Managers' Suggestions and Recommendations

Use the lobby video/TV for patient education: Everything from the different types of dialysis, home treatments, recipes, feel-good stories, etc.

It would be spectacular if Admissions could go through a checklist and make sure we have all that we need.

CPR certification – put this back on Education to do, take it from CMs

All clinics should have a dedicated secretary to greet people. They could also help the CM.

Fix issues with incomplete information on Patient Card (or list). Frequently missing who their doctors are, Transplant centers, PCP, etc

Would be nice to have a SOP (Standard Operating Procedure) tab in something like CTH for Clinic Managers. E.g. – what to do when there's a power loss in the water system.)

Go back to the ratio of 1 nurse to 3 patients instead of 1 nurse to 4 patients

Clinic Leaders' Suggestions and Recommendations (Cont'd)

Create "Care Coordinators" to help with patient logistics, travel, transients, transportation, referrals from PCPs. They could float between clinics.

DI Scans: Add QR code to documents, so when they're scanned they automatically go to the correct category

Sister (or Powerhouse) Clinics. Additional support provided as float services for secretaries/admins, FA on site or float, CN

Increase salaries so they're comparable to our competitors'

New staff orientation for clinic staff

Proper onboarding for preceptor nurses

Create an application with a master calendar for clinics so the way we keep track of administrative things obviates the need for sticky notes

Use waiting room TVs for patient education:
Proper diet,
patient stories,
roles (KKCA,
SW, RD, etc.)
Recipes,
Regions, etc.

Clinic Leaders' Suggestions and Recommendations (Cont'd)

Prioritize Alerts in eCC and emails. Who determines what is prioritized in both the email Focus folder and the Inbox?
Better communication on why a special project is needed (e.g. – Vitamin D project – new and didn't know what it was for.)

Couriers – bring back couriers to pack lab specimens and ensure timely and dependable drop off to FedEx.

Better training for the business side of the role

New Admissions – need better process in place. Data missing; things like HepB status, financial clearance and CVC placement. Need direct contact with Case Manager

Spectra Labs – need live updates. Currently – results only come in at 5am and 5pm.

Training tablets for In-Center patients – short training videos on anything from the benefits of dialyzing from home, to diet, to how to connect with other patients.

APPENDIX
